Innovation Requires Space

New Headquarters

During the last ten years, Immudex has enjoyed significant growth, thanks to our unique Dextramer® Technology and continuous innovation within immunology such as the dCODE™ Dextramer® Technology for epitope discovery and the Klickmer Technology.

The trust and loyalty from our customers and business partners have helped us grow, making relocation to a new and larger facility necessary.

Allow us to take this opportunity to thank you for

- your trust in our company and our innovative products
- being a loyal customer and partner

We hope for a continued and long-lasting collaboration with you.

From February 1, 2020 you will find the Immudex Headquarters at:

**Bredevej 2A
DK-2830 Virum
Denmark.**

From here we will continue to bring innovative products and second-to-none service to the immune monitoring community around the world.
