

## Combine T-Cell Antigen-Specificity with Single-Cell Multi-Omics

With dCODE Dextramer® [10x], you can combine sensitive and multiplexed detection of antigen-specific T cells with single-cell immune profiling on the 10x Chromium Controller. Obtain simultaneous characterization of TCR sequences, surface protein, and gene expression at a single T-cell level.

By adding a unique DNA barcode targeted to each investigated specificity, dCODE Dextramer® [10x] allows you to maximize the information gained in your T-cell experiments.

## Identify Antigen-Specific T Cells and TCR Clonotypes at Single-Cell Resolution

dCODE Dextramer® [10x] reagents allow you to investigate antigen-specificity and gain information on gene expression, cell surface protein expression, and TCR clonotype.

## Redefine T-Cell Phenotyping

Ready-to-use immune monitoring reagents with the superior dCODE Dextramer® sensitivity for a comprehensive T-cell analysis:

- Easier and faster single-cell multi-omics
- Superior resolution even with low-affinity interactions
- Compatible with 10x Chromium System

## Transform Your Research Strategy with dCODE Dextramer® [10x]

Get the most out of your sample. Obtain the complete immunological profiling in just one workflow by combining dCODE Dextramer® technology with 10x's Single-Cell immune profiling solutions.

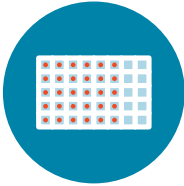

### dCODE Dextramer® [10x] Products

- MHC I dCODE Dextramer® [10x] for the detection of CD8+ antigen-specific T cells
- MHC II dCODE Dextramer® [10x] for the detection of CD4+ antigen-specific T cells
- dCODE® Klickmer to create personalized dCODE Dextramer® [10x] by loading your choice for the detection of biotinylated molecules (for B-cell research and much more)

### dCODE Dextramer® Product Grades

**EXPLORE**

Reagent panels [16, 32, 48, 64, 80, 96, nx96 specificities] designed for large screenings [i.e. epitope discovery and neo-antigen screening]

- Selected MHC I alleles available
- Peptide binding based on peptide-MHC affinity prediction, not verified by a quality control

**GOLD**

Single reagents designed for the analysis of few antigen specificities [i.e., monitoring of a small number of antigen-specific populations or validation of large screening findings]

- All MHC I and MHC II alleles from Immudex' catalog are available. List of alleles on Immudex' website
- Peptide binding verified by a quality control
