

Recommended use U-Load MHC II is a peptide loadable MHC II monomer. U-Load MHC II can be used to generate MHC-peptide monomers with your own peptide of choice.

The MHC-peptide monomers can be dextramerized with U-load Dextramer[®] or U-load dCODE Dextramer[®] to make U-Load Dextramer[®] MHC II or U-Load dCODE Dextramer[®] MHC II reagents for analysis of antigen-specific CD4⁺ T cells by flow cytometry, PCR/NGS, or single cell multi-omics analysis.

For research use only. Not for use in diagnostic or therapeutic procedures.

Reagents provided

- U-Load MHC II: 16.6 μM peptide-loadable MHC II monomer consisting of peptide receptive, biotinylated MHC II monomer provided in PBS, 15 mM NaN₃. Each U-Load MHC II is uniquely identified by the allele, e.g., U-Load MHC II HLA-DRB1*0101.
- U-Load MHC II Loading Buffer: Phosphate Buffer, pH 5.9.
- U-Load MHC II Peptide Loading Component: Lyophilized peptide loading reagent.

Sizes

Tests	Content		
	U-Load MHC II	U-Load MHC II Loading Buffer	U-Load MHC II Peptide Loading Component
50	1 vial (25 μL)	1 vial (1 mL)	1 vial (5 mg)
150	1 vial (75 μL)	1 vial (1 mL)	1 vial (5 mg)
500	1 vial (250 μL)	1 vial (1 mL)	1 vial (5 mg)

Storage

Store at -80°C. Avoid repeat freeze-thaw cycles.

Precautions

Contains sodium azide (NaN₃), a chemical highly toxic in pure form. At product concentrations, though not classified as hazardous, sodium azide may react with lead and copper, plumbing to form highly explosive build-ups of metal azides. Upon disposal, flush with large volumes of water to prevent metal azide build-up in plumbing. As with any product derived from biological sources, proper handling procedures should be used. For professional users.

Recommended protocols

See "Protocol for Preparation of MHC II-peptide monomer and fluorescent U-Load Dextramer[®] MHC II" and "General staining procedure MHC Dextramer – PBMC's" (www.immudex.com/resources/protocols/).
