

Tailored Solutions for Unprecedented Research

We offer custom solutions and services tailored to your needs providing unique Dextramer[®] products for unique research applications.

Immudex Custom Solutions and Services operates like an extension of your research lab. We work with you to tailor solutions and protocols, create custom high-quality reagents, and guide successful research strategies.

Unique Products for Unique Research Applications

Immudex experts accompany and see through every phase of your project, from understanding the specific requirements to designing, setting up, and successfully deploying a solution or service to ensure you will get:

- A solution or service tailored specifically to your needs
- Access to extensive knowledge and expertise in immune monitoring
- Professional support and transparent communication
- The most advanced scientific insights

Custom Solutions

Immudex' experts consult with your team to address the experimental requirements needed to succeed:

- Design of unique Dextramer[®] solutions suitable to your research
- Custom protein expression and validation setup (TCR, MHC, or other)
- Establishment of GMP production with stage-gate, stringent quality controls
- Assistance in experimental design and data interpretation

Custom Services

Immudex provides you with adaptations of the products offered in our standard portfolio adjusted to your experiment:

- Variation of the numbers of MHC monomers on the dextran backbone
- Non-standard fluorophore labelling
- QC assaying for reagent or monomer validation
- Adjusted reagent concentration
- Adjusted vial amount

A Team of Experts at Your Service

A precise and detailed understanding of immunity is at the core of the Immudex mission to unlock the therapeutic potential of immune cells.

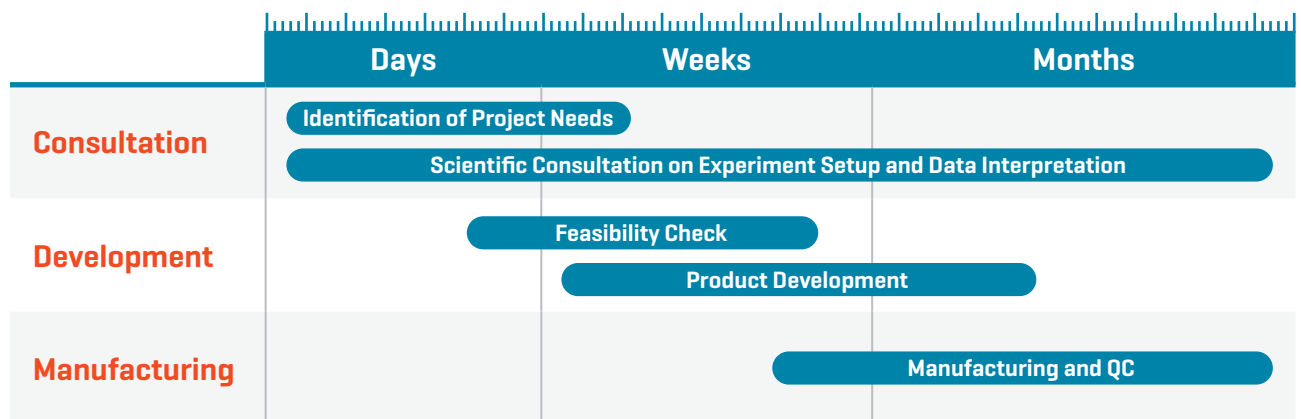

For over 10 years, Immudex experts have developed powerful research tools to characterize the interplay of immune cells and disease. Their collective knowledge and experience have been instrumental in advancing immune monitoring research worldwide.

Unique Immune Monitoring Capabilities to Push the Boundaries of Your Research

Immudex emphasizes an affordable working model that builds on a flexible and effective partnership. Every project is assessed individually. Depending on scope, complexity and resource needs, a Custom Solution or a Custom Service is matched to your research needs.

While the timeline will vary depending on the project needs and its complexity, a Custom Solution and Service consists of three parts:
